Overview

Q-PROS Manual Guide is a Chrome browser extension that records your browser interactions and automatically generates professional manual test guides. Perform a workflow once, and the extension captures every click, keystroke, form submission, and navigation — complete with screenshots — then exports it as a Word document, PDF, or other formats.

KEY VALUE PROPOSITION

Without Q-PROS	With Q-PROS
Write test steps manually	Steps captured automatically
Take screenshots manually	Screenshot per step, auto-captured
Inconsistent documentation	Standardized format every time
Hours to document a workflow	Minutes — record, review, export

Why Q-PROS Manual Guide

PROBLEM

Manual QA testers spend significant time documenting test procedures. A single workflow with 20 steps can take 30-60 minutes to document properly — writing each step, taking screenshots, formatting the document, and ensuring consistency.

SOLUTION

Q-PROS Manual Guide eliminates the documentation overhead:

- **Record** the workflow once by performing it naturally
- **Review** captured steps in the side panel editor
- **Export** a professional Word or PDF document in seconds

BENEFITS

- **Time savings:** Reduce documentation time by 80-90%
- **Consistency:** Every guide follows the same professional format
- **Accuracy:** Steps are captured exactly as performed — no human error
- **Screenshots:** Automatically captured with the target element highlighted
- **Privacy:** Fully local — no data leaves your machine

Installation

METHOD 1: LOAD UNPACKED (DEVELOPMENT/INTERNAL USE)

1. Download or clone the repository:

```
git clone https://github.com/husseinzahran7/Q-PROS-Manual-Guide.git
```

2. Install dependencies and build:

```
npm install  
npm run build
```

3. Open Chrome and navigate to:

```
chrome://extensions
```

4. Enable **Developer mode** (toggle in top-right corner)
5. Click **Load unpacked** and select the `dist/` folder from the project
6. The Q-PROS Manual Guide icon appears in your Chrome toolbar

METHOD 2: LOAD FROM ZIP (TEAM DISTRIBUTION)

1. Download the extension ZIP file from your team lead or GitHub Release
2. Extract the ZIP to a permanent location (e.g., `C:\Extensions\Q-PROS-Manual-Guide`)
3. Follow steps 3-6 from Method 1, selecting the extracted folder

Note: The extension requires Chrome version 114 or higher (Manifest V3 support).

Quick Start

YOUR FIRST RECORDING

1. Click the **Q-PROS** icon in your Chrome toolbar

2. Click **“Start recording”** (or press `Alt+Shift+R` anywhere)
3. **Perform your workflow** — navigate, click, type, submit forms as normal
4. **Watch the REC badge** — a small overlay shows the step count and flashes when each step is saved
5. Click **“Stop recording”** when done
6. Click **“Open guide library”** to review your recording
7. **Edit steps** if needed (rename, reorder, add notes)
8. Click **“Export Word”** or **“Export PDF”** to generate your guide

EXAMPLE WORKFLOW

Recording a login process:

Step	Action Captured	Screenshot Shows
1	Navigate to example.com/login	Login page
2	Click “Email” field	Email field focused
3	Enter “ user@company.com ”	Field with email typed
4	Click “Password” field	Password field focused
5	Enter password	Field masked (privacy)
6	Click “Sign In” button	Button highlighted
7	Navigate to dashboard	Dashboard page

Export result: A Word/PDF document with all 7 steps, each with a screenshot and description.

Features

RECORDING CAPABILITIES

Feature	Description
Click capture	Records which element was clicked with position
Input capture	Records typed text (shows full value, not individual keystrokes)
Form changes	Dropdown selections, checkbox toggles, radio buttons
Navigation	Page loads, SPA route changes, back/forward
Keyboard shortcuts	Enter, Tab, Escape, and key combinations
File uploads	Detects file selection events
Drag & drop	Captures drag start and drop targets
Dialogs	Alert, confirm, prompt, and print dialogs
Multiple tabs	Follows recording across tab switches

SCREENSHOT SYSTEM

- **One screenshot per step** — captured at the moment of action
- **Element highlighting** — clicked/interacted element is ringed in the screenshot
- **Automatic compression** — JPEG encoding keeps file sizes manageable
- **RE overlay excluded** — the recording badge never appears in screenshots

SMART INPUT HANDLING

The extension uses intelligent debouncing for text input:

- Typing “Hello World” in a search bar = **1 step** (not 11 keystroke steps)
- The full text appears in the step description
- Natural typing pauses (up to 5 seconds) are handled correctly
- Input is flushed when you: click elsewhere, press Enter/Tab, navigate away, or submit a form

PRIVACY BY DESIGN

- **Password fields** are never recorded — values are completely excluded
- **Sensitive fields** (detected by autocomplete attributes, type=password, etc.) are masked
- **Screenshot redaction** — sensitive field regions are blacked out in screenshots
- **No network requests** — everything stays on your machine
- **No analytics** — zero telemetry or tracking

STEP EDITOR (SIDE PANEL)

Action	How
Rename a step	Click the step title and edit
Add description	Click the description field and type
Reorder steps	Drag and drop steps up/down
Delete a step	Click the delete button (can be restored)
Insert manual step	Add a “Note” or “Wait” step
Set workflow goal	Describe what the workflow accomplishes
Set success criteria	Define how to verify the workflow worked
Zoom screenshot	Click a screenshot to view full size
Mark sensitive	Flag a step to mask its value

BILINGUAL SUPPORT

The extension UI automatically follows your browser language:

- **English** — default
- **简体中文** — Simplified Chinese

Recording Workflow

STEP 1: START RECORDING

1. Navigate to the page where your workflow begins
2. Click the Q-PROS icon → **Start recording**
3. The starting URL is automatically captured as Step 1
4. A REC badge appears on the page showing the live step count

STEP 2: PERFORM YOUR WORKFLOW

Interact with the browser naturally:

- Click buttons and links
- Fill in forms
- Navigate between pages
- Submit data

Each action is captured with:

- Action type (click, input, navigation, etc.)
- Target element (with multiple selector strategies)
- Screenshot of the page
- Timestamp

STEP 3: STOP RECORDING

Click the Q-PROS icon → **Stop recording**

The REC badge disappears. All steps are saved locally in your browser.

STEP 4: REVIEW AND EDIT

Click **Open guide library** to open the side panel:

1. Select your recording from the list
2. Review each step — title, description, screenshot

3. Edit as needed:

- Fix unclear step titles
- Add context in descriptions
- Remove accidental clicks
- Reorder steps if needed
- Insert notes for important context

STEP 5: EXPORT

Click **Export Word** or **Export PDF**:

- A save dialog appears
 - Choose where to save the file
 - The document is generated with:
 - Cover page (PDF only)
 - All steps with screenshots
 - Professional formatting
-

Editing Steps

MODIFYING STEP TITLES

Click any step title to edit it. The title should clearly describe the action:

-  "Click the Login button"
-  "Enter email in username field"
-  "Click" (too vague)
-  "Step 3" (not descriptive)

ADDING DESCRIPTIONS

Click the description area below a title to add details:

- What data was entered
- Why this step matters

- What to expect after this action

REORDERING STEPS

Drag a step by its handle (≡ icon) to reorder. This is useful if:

- Steps were captured out of order
- You want to group related actions

DELETING STEPS

Click the trash icon to remove a step. Deleted steps can be restored from the “Deleted steps” section.

MANUAL STEPS

Insert steps that weren’t captured:

- **Note:** Add explanatory text (e.g., “Verify the confirmation email arrived”)
 - **Wait:** Add a pause (e.g., “Wait 3 seconds for the page to load”)
-

Export Formats

WORD DOCUMENT (.DOCX)

Best for: Sharing with stakeholders, documentation repositories

Features:

- Professional formatting with Q-PROS branding
- Step-by-step layout with screenshots
- Table of contents compatible
- Editable in Microsoft Word, Google Docs, LibreOffice

PDF DOCUMENT (.PDF)

Best for: Print-ready guides, archiving, formal documentation

Features:

- Cover page with title, date, and URL
- Centered layout for clean presentation
- Screenshots centered on the page
- Page numbers and professional typography

MARKDOWN SOP (.MD)

Best for: Developer wikis, GitHub repositories, technical documentation

Features:

- Plain text format
- Embeds screenshots as base links
- Version-control friendly
- Compatible with all Markdown renderers

PLAYWRIGHT TEST (.TS)

Best for: Automated test suites, CI/CD pipelines

Features:

- Generates a `@playwright/test` script
- Uses semantic locators (role, label, placeholder)
- Ready to run with `npx playwright test`
- Includes assertions for page state

DEVTOOLS RECORDER JSON (.JSON)

Best for: Chrome DevTools import, replay in browser

Features:

- Importable into Chrome DevTools → Recorder
 - Step-by-step replay capability
 - No coding required
-

Privacy & Security

DATA STORAGE

All data is stored locally in your browser using IndexedDB:

- Recordings (session metadata)
- Steps (actions with screenshots)
- Screenshots (JPEG images)

No data is transmitted anywhere. There is:

-  No backend server
-  No cloud storage
-  No analytics or tracking
-  No account or login required

WHAT IS RECORDED

Recorded	Not Recorded
URLs and page titles	Browsing history
Element interactions (clicks, inputs)	Other tabs (unless recording)
Typed text in form fields	Passwords
Screenshots of the active tab	Bookmarks
Dialog messages (alert, confirm)	Cookies or tokens

SENSITIVE DATA PROTECTION

- **Password fields:** Completely excluded from recording
- **Autocomplete-sensitive fields:** Values are masked
- **Screenshot redaction:** Sensitive field regions are blacked out
- **User control:** Any step can be marked as sensitive

PERMISSIONS EXPLANATION

Permission	Why It's Needed
<code>activeTab</code>	Capture the current tab you're recording
<code>tabs</code>	Track which tab is being recorded
<code>scripting</code>	Inject the recorder into pages
<code>storage</code>	Save recordings locally (IndexedDB)
<code>sidePanel</code>	Display the step editor panel
<code>downloads</code>	Save exported Word/PDF files
<code><all_urls></code>	Record on any website you choose

Troubleshooting

"NO STEPS ARE BEING RECORDED"

1. **Reload the page** after installing the extension
2. **Check the REC badge** — it should appear when recording starts
3. **Try clicking** on a link or button — the step count should increase
4. **Open DevTools** (F12) → Console tab → look for errors

"SCREENSHOTS ARE BLANK OR MISSING"

1. Ensure the extension has permission for the site
2. Check that `chrome.tabs.captureVisibleTab` works (test in DevTools)
3. Try recording on a simpler page (e.g., google.com)

"EXPORT FAILS"

1. **Check the Service Worker:** Go to `chrome://extensions` → find Q-PROS → click "Service Worker" link → check Console for errors
2. **Try a different export format** (Word vs PDF)
3. **Ensure enough disk space** for the file

”EXTENSION ICON DOESN’T APPEAR”

1. Go to `chrome://extensions`
2. Find “Q-PROS Manual Guide”
3. Click the pin icon to pin it to your toolbar

”STEPS SHOW WRONG TITLES”

Steps are titled automatically based on the action. You can:

- Edit step titles manually in the side panel
 - The title updates will be reflected in the export
-

FAQ

Q: DOES THIS WORK ON ALL WEBSITES?

A: Yes, the extension works on any website. Some sites with heavy JavaScript frameworks (React, Angular, Vue) may have timing issues with screenshots, but step capture still works.

Q: CAN I RECORD IN MULTIPLE TABS?

A: Yes. If you click a link that opens a new tab, the recording follows you. Steps from all tabs are included in the final guide.

Q: HOW LONG CAN A RECORDING BE?

A: There’s no hard limit. However, very long recordings (100+ steps) may use significant browser storage. Each screenshot is approximately 50-100KB.

Q: CAN I EDIT A RECORDING AFTER STOPPING?

A: Yes. Open the guide library, select your recording, and edit any step — titles, descriptions, order, or delete unwanted steps.

Q: DOES IT WORK WITH SINGLE PAGE APPLICATIONS (SPAS)?

A: Yes. The extension captures route changes in SPAs (React Router, Vue Router, Angular Router) as navigation steps.

Q: IS MY DATA SAFE?

A: Yes. All data stays on your machine. No network requests are made except for loading Google Fonts for the UI. Passwords are never recorded.

Q: CAN I EXPORT TO MULTIPLE FORMATS?

A: Yes. Each export is independent — record once, export as Word, PDF, Markdown, or Playwright as needed.

Q: DOES THIS WORK IN EDGE, BRAVE, OR OTHER CHROMIUM BROWSERS?

A: Yes. Any Chromium-based browser (Edge, Brave, Vivaldi, Arc) supports Chrome extensions.
